

Type 8791 BASIC can be combined with...

Yoke type actuators

Rack/pinion actuators

Rack/pinion actuators with remote positioner

Process control valve with remote positioner

Hygienic process control valve with remote positioner

Digital electropneumatic positioner

- Compact and robust design
- Easy to start using tune function
- Dynamic positioning system with no air consumption in controlled state
- AS-Interface Fieldbus (optional)
- Mounting acc. to IEC 534-6 / VDI VDE 3845 or Remote

The robust and compact positioner is designed to a standardisation acc. to IEC 534-6 or VDI/VDE 3845 for assembly with linear and rotary actuators. In addition, the remote version with the displacement position sensor can be combined with Bürkert process control valves

The setpoint setting for the electro-pneumatic digital Positioner SideControl BASIC occurs using a standard signal 4...20mA or with AS-Interface as an option. In addition there is a binary input and an optional analogue feedback available.

The valve opening is signalled by a mechanical indicator element and the device status is shown on three coloured LEDs. All the operational elements are found in the housing.

The start-up happens automatically, and directly at the device the following functions by a DIP switches are activated:

- Close tight function
- Inversion of the operating direction of the setpoint signal
- Characteristic curves selection
- Switching - manual and automatic operation

Additional possibilities on configuration and parameter setting, for example, linearisation of the operation characteristics by using communications software which allows customised programming

The pilot valve system can be used equally for single and double-acting drives. It is characterised by a defined safety feature in case of failure of the electrical or pneumatic power supply and possesses an enormous air capacity range with pressure supply up to 7 bar.
